

A terminal for cashless payments for museums, foundations and organisations.

Cash transactions have been losing popularity in the pandemic over comfort and security issues. Devices that have been operating in many museums and cultural institutions in Western Europe for many years respond to these requirements and expectations.

Our company has over 10 years of experience in producing vending machines you will find in museums and tourist facilities throughout Poland and in many European Union countries. Using our knowledge and experience we have designed a product that comes up to the expectations of both visitors and the users of these terminals.

FOR DONORS

The functionality of this terminal is aimed at visitors who wish to support institutions through a non-cash payment. The process itself is very easy, guarantees security, and ensures discretion for the donor. The terminal accepts PIN-less and contactless payments via payment cards and mobile phones.

FOR USERS

Our product comes in a state-of-the-art yet simple and subtle design. It perfectly fits into the architecture of both traditional and modern religious buildings. This maintenance free system enables independent and quick changes of selection by the user.

Purpose

- Museums
- Foundations
- Theatres
- Sport facilities, stadiums
- State institutions
- Social organisations
- Tourist facilities
- Religious buildings

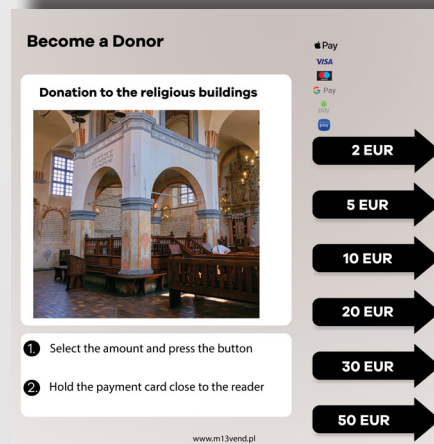

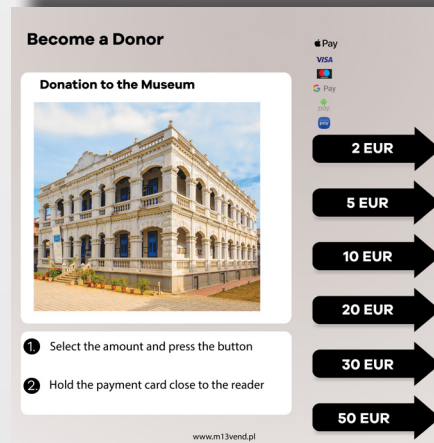

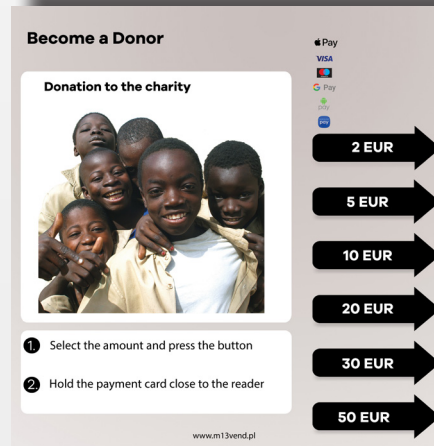

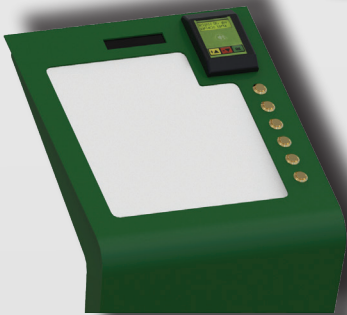

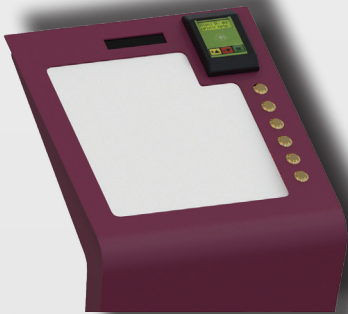

Functionality

- Secure cashless transactions
